

## CLAIMS

1. A method of displaying a subset of a plurality of user  
5 interface elements in a user interface, the method comprising  
the steps of:

(i) determining the size of the subset of  
plurality of UI elements that can be displayed within the  
user interface;

10 (ii) determining a plurality of UI elements that  
may be selected for display within the user interface;

(iii) selecting the subset of UI elements from the  
plurality of UI elements determined in step (ii); and

(iv) displaying the subset of UI elements selected  
15 in step (iii) within the user interface.

2. A method according to claim 1, wherein step (iii) is  
repeated to select a further subset of UI elements in  
response to a user input and step (iv) is then repeated to  
20 display the further subset of UI elements within the user  
interface.

3. A method according to claim 2, wherein the user input  
comprises activating a user input means and the selection and  
25 display of a further subset of UI elements causes a list or  
menu to be scrolled.

4. A method according to any of claims 1 to 3 wherein, the  
plurality of UI elements are stored at a single location and  
30 a mark-up language component is provided that defines the  
location of the plurality of UI elements.

5. A method according to claim 4, wherein the mark-up language component further defines the display of the selected subset of UI elements in a list.

5 6. A method according to claim 5, wherein a template is associated with the mark-up language component, the template determining the appearance of the selected subset of UI elements displayed in the list.

10 7. A method according to any of claims 1 to 3 wherein the plurality of UI elements are stored in a single file, a mark-up language component is provided that defines the location of the file and the file comprises one or more data resources for display in the user interface.

15

8. A method according to claim 7, wherein the mark-up language component further defines the display of the selected subset of UI elements in a list.

20 9. A method according to claim 8, wherein a template is associated with the mark-up language component, the template determining the appearance of the selected subset of UI elements displayed in the list.

25 10. A method according to any of claims 3 to 9, wherein the list of the selected subset of UI elements comprises one or more further lists, each of the one or more further lists being identified by a unique expression.

30 11. A data carrier comprising computer executable code for performing the method of any of claims 1 to 10.

12. A device comprising a display and a user interface the device being configured, in use, to

(i) determine the size of a subset of plurality of UI elements that can be displayed within the user interface;

5 (ii) determine a plurality of UI elements that may be selected for display within the user interface;

(iii) selecting the subset of UI elements from the plurality of UI elements determined in step (ii); and

10 (iv) displaying the subset of UI elements selected in step (iii) within the user interface.

13. A device according to claim 12, wherein the device further comprises user input means and is configured, in use, to respond to a user input so as to repeat step (iii) to  
15 select a further subset of UI elements and to then repeat step (iv) to display the further subset of UI elements within the user interface.

14. A device according to claim 12 or claim 13, wherein the  
20 device responds to the activation of the user input means such that the selection and display of a further subset of UI elements causes a list or menu to be scrolled.

15. A device according to any of claims 12 to 14 wherein the  
25 device further comprises storage means and the plurality of UI elements are stored at a single location and a mark-up language component is provided that defines the location of the plurality of UI elements.

30 16. A device according to claim 15, wherein the mark-up language component further defines the display of the selected subset of UI elements in a list.

17. A device according to claim 16, wherein a template is associated with the mark-up language component, the template determining the appearance of the selected subset of UI elements displayed in the list.

18. A device according to any of claims 12 to 14 wherein the device further comprises storage means and the plurality of UI elements are stored in a single file wherein a mark-up language component is provided that defines the location of the file and the file comprises one or more data resources for display in the user interface.

19. A device according to claim 18, wherein the mark-up language component further defines the display of the selected subset of UI elements in a list.

20. A device according to claim 19, wherein a template is associated with the mark-up language component, the template determining the appearance of the selected subset of UI elements displayed in the list.

21. A device according to any of claims 15 to 20, wherein the list of the selected subset of UI elements comprises one or more further lists, each of the one or more further lists being identified by a unique expression.

22. A device according to any of claims 11 to 21, wherein the device comprises wireless communication means.

23. A device comprising processing means, storage means, a display, user input means, wireless communication means and a

user interface, wherein the device is configured to perform the method of any of claims 1 to 10.
